Q4) Solve $y'' - 2y' + y = e^x \log x$, using method of variation.

Q5) A particle is executing simple harmonic motion with amplitude 20 cm and time 4 seconds. Find the time required by the particle in passing between points which are at distances 15 cm and 5 cm from the centre of force and are on the same side of it.

Section - C

(8 Marks Each)

Q6) Find the work done in moving a particle in the force field

(a) the straight line from $(0, 0, 0)$ to $(2, 1, 3)$;

(b) the curve $x^2 = 4y, 3x^2 = 8z$ from $x = 0$ to $x = 2$.

Q7) Evaluate $\int_C [(x^2 + xy)dx + (x^2 + y^2)dy]$, where C is the square formed by the lines

$$x = \pm 1, y = \pm 1.$$

Q8) A car hire firm has two cars which it hires out day to day. The number of demands for a car on each day is distributed as a Poisson distribution with mean 1.5. Calculate the proportion of days

(a) on which there is no demand,

(b) on which demand is refused. ($e^{-1.5} = 0.2231$).

Q9) Two random samples from two normal populations are given as :
